The KEYMACRO is a small, yet powerful software utility. When a key is hit, the software starts a program, and sends the main argument to that program. Using a list of keys to configure a hot key (for example to open a program with a file as argument), it is easy to create a quick and easy macros for

numerous applications. I've also played with this (and a few other similar programs) for a while. Some (like SuperMacro and KEYSHELL) require the use of a terminal and I know some (like Macros on Windows) which require the use of Windows. There's an app for that! A: There's a few, like SuperMacro, KeyShell, Macros on Windows (which I think would be the closest). Of course, there's always Python (Python-Macros and PyMacros). But my personal preference is Keyboard Maestro. A: For Windows, I use macro explorer. If you are looking for something more powerful, I would suggest Keyboard Maestro. You will have to start at the bare minimum, and add features as you need them. Q: Iterate through a string of words - Python I have a list of dicts, something like this: songs = [{"artist": "Lou Reed", "track": "Walk On The Wild Side", "type": "rock"}, {"artist": "The Beatles", "track": "Eleanor Rigby", "type": "rock"}, {"artist": "Grateful Dead", "track": "Dark Star", "type": "rock"}] I need to be able to get the artist and the track for each song. Currently, I am simply doing: for song in songs: print song['artist'] print song['track'] Which returns: Lou Reed Walk On The Wild Side The Beatles Eleanor Rigby Grateful Dead Dark Star That's fine, but I want the output to be: Lou Reed Walk On The Wild Side The Beatles Eleanor Rigby Then I need to iterate through each item in the string, and return artist and track for each item. I can't figure out how to do that. Any ideas? A: If your data is available as a dict you 2edc1e01e8

Shelf is a small, simple and easy to use dock bar capable of launching your favorite files. It comes in the form of a portabe exe which can install a copy of itself on any machine. Shelf uses the Java2D API and per pixel translucency to provide some pleasing aesthetics. What Shelf can do: Shelf can launch almost anything, allowing for custom actions or minimised windows to stay pinned to the dockbar for easy access. This is it, the piece I need. I have looked at others, but found it hard to use. Shelf is smaller, faster and has been running fine for me for a while now. A: I like DigiKam. There is also an official Nautilus plugin that allows that behavior. Also, you might try this: A: I used to use Superbar, which is on sourceforge. I switched to Avada, which is available from the Avada page at the Gnome website. Avada is smaller and faster. This invention relates to sound signal synthesizers and more particularly to apparatus for synthesizing an arbitrary waveform waveform based on the output of a series of waveform generating circuits such as a digital audio decoder and a microprocessor. A sound signal synthesizer is used to generate a waveform waveform which is phase-locked to a reference waveform. A sound signal synthesizer is used to synthesize a sound signal by selecting and connecting different waveform generating circuits in a desired sequence. Typically, the output of a waveform generating circuit is connected to a microprocessor which controls the sequence of the connections so that a desired sound signal can be generated. The microprocessor determines the connection sequence in accordance with a digital signal input to the microprocessor. There are many situations where it is desirable to generate an arbitrary waveform waveform that is not a sinusoidal waveform. Examples of such situations are when the waveform is used to modulate a carrier waveform to produce a composite signal, or when the waveform is used to control a signal produced by a direct or indirect sound reproduction system. The Direct Modulation Synthesizer (DMS) developed at the RCA Laboratory was a first attempt to solve the need for a waveform generator. The DMS was a sound signal synthesizer which used a special digital-to-analog converter (DAC) to produce a carrier waveform. A
